RE: NetDisc Intra-net Web Interface and Rimage WebRSM Compatibility

This document details how to set up the NetDisc web interface to maintain compatibility with a pre-existing Rimage WebRSM installation. Rimage 8.1 includes Rimage's WebRSM for remote system management of autoloaders. When WebRSM is installed, it interferes with the default web site that NetDisc installs.

Prerequisites

- A Rimage system running Software Suite 8.1 or higher
- WebRSM is present on the system
- NetDisc 1.31 or higher is being installed

Issue

Windows XP can only run a single web site at a time. If WebRSM is present on a Rimage system, the NetDisc web site must be added to the defined WebRSM web site as a virtual directory.

Resolution

1. Verify that WebRSM is installed by opening a web browser on the Control Center and navigate to *http://localhost* - if WebRSM is present, continue with this procedure
2. Open *Computer Management* (right-click on *My Computer*, select *Manage*)
3. Expand *Services and Applications*
4. Expand *Internet Information Service*
5. Select *Web Sites*. A list of active sites will appear in the right-side pane
6. In the right pane, right-click on *WebRSM* and select *Properties*
7. On the *ISAPI Filters* tab, click *Add...*
8. Under *Filter Name*, enter *PHP*
9. Under *Executable* enter *C:\PHP\php5isapi.dll*
10. Click *OK* to return to the properties dialog
11. Click *OK* to exit the properties dialog
12. Back at the right pane, right-click on *WebRSM* and select *New -> Virtual Directory...*
13. For *Alias* enter *netdisc* - click *Next*
14. For *Directory* browse to *C:\inetpub\wwwroot\NetDisc* - click *Next*
15. For *Permissions* enable ONLY the first two items - click *Next*
16. Click *Finish*
17. In the left pane, right-click on *netdisc* under *WebRSM* and select *Properties*

18. On the *Virtual Directory* tab click *Configuration...*
19. On the *Mappings* tab click *Add...*
20. Under *Executable* enter *C:\inetpub\wwwroot\NetDisc*
21. Under *Extension* enter *.php*
22. Click *OK* to close the dialog
23. Click *OK* to return to the Properties dialog
24. On the *Documents* tab click *Add...*
25. Enter *index.html* and click *OK*
26. Click *OK* to exit the properties dialog
27. Verify that the procedure was successful by opening a web browser and navigate to *http://localhost/netdisc* – if successful, either an Offline or Online graphic will be displayed. If Offline AND Online are displayed together, the procedure was not successful.
